This paper is based on a presentation delivered by the authors at the 8th International Conference of Community Psychology.

The first case study was funded in part by the National Institute on Disability, Independent Living, and Rehabilitation Research, award number 90DPEM0002. The information presented here reflects the opinions of the author and not the funding agency.

Funding for the second case study from Spain was funded by the DG Justice of the European Commission Rights Equality and Citizenship Work (Grant #: REC-AG #809813), and the Spanish Ministry of Science, Innovation and Universities (Grant #: RTI2018-096403-B-I00).

Promoting Justice through Community-Based Research: International Case Studies

Abstract

Community-based participatory research (CBPR) approaches to promoting justice focus on working from the ground up and giving a voice to marginalized communities regarding their concerns, potential solutions, and how to address social justice issues that matter to them. The pursuit of justice is often related to efforts to attain personal as well as collective well-being. In this paper, we illustrate three exemplars of community psychologists' efforts to promote justice. Within each case study, we discuss the social and community context and examine how the researchers built partnerships and solidarity, developed ways of doing, and approached challenges and solutions. First, we present an example to promote economic justice through an entrepreneurship initiative developed in collaboration with young Black youth with disabilities in the United States. The second case illustrates an effort to promote reproductive justice in collaboration with Roma women and girls in Spain. The third exemplar depicts the use of life stories as a method to raise the voices of displaced, marginalized indigenous women in Peru. Based on these three case studies, we present a synthesis model of social justice. We also discuss implications for future studies emphasizing the importance of engaging community participants in research meaningful ways, developing sustainable partnerships, and decolonizing research.

Keywords: community-based participatory research, social justice, economic justice, reproductive justice

1
2
3
4 Community researchers and practitioners have been deeply committed to embracing
5
6 participatory research to promote social justice. Social justice is one of the core values of
7
8 community psychology (Kloos et al., 2020), and much of its scholarly work has been framed in
9
10 terms of justice. Social justice is understood as a complex and multifaceted term that refers to
11
12 rights, equitable distribution of resources, opportunities, and decision-making power among
13
14 individuals that enable them to thrive within a society (Evans et al., 2017; Fondacaro &
15
16 Weinberg, 2002; Prilleltensky, 2011; Suarez-Balcazar et al., 2019).
17
18
19
20
21

22 Social justice is based on the *principle of fair equality*—whereby all human beings have
23
24 rights and responsibilities—and the *principle of difference*—which suggests that goods should be
25
26 redistributed in such a way as to ensure that all human beings have sufficient resources to enjoy a
27
28 freely chosen life with dignity and respect (Prilleltensky, 2011). The dominant concept of social
29
30 justice includes a *procedural dimension*—opportunities to freely decide on a life project, and a
31
32 *distributive dimension*—access to the necessary resources to achieve it (Nelson, 2013).
33
34
35
36

37 Many of the movements that have gained momentum around the globe in recent years,
38
39 supported by community scholars and practitioners, have underscored social justice values.
40
41 These movements have brought people together from diverse disciplines, diverse ethnic and
42
43 racial backgrounds, and all walks of life, while calling for racial justice (e.g., Black Lives
44
45 Matter), environmental justice (e.g., the Climate Justice Alliance), indigenous justice (e.g., the
46
47 First Peoples Worldwide), justice for survivors of sexual abuse (e.g., the #MeToo Movement),
48
49 and immigrant justice (e.g., Families Belong Together), among others. The widespread interest
50
51 in developing initiatives aimed at increasing global social justice is not accidental. The growing
52
53 inequalities affecting humanity and the urgent search for answers to the global problems
54
55 affecting our communities require a search for new frameworks (Wolff et al., 2016). This need is
56
57
58
59
60
61
62
63
64
65

1
2
3
4 reflected in theories and models of health equity (Corning, 2011), critical theory (De Vita, 2014),
5
6 critical race theory (Delgado & Stefancic, 2000), structural racism (Wolff et al., 2016), feminist
7
8 theory (Riger, 2017), civil rights (Jenkins & Morris, 1984), disability rights (Charlton, 2000),
9
10 LGBTQ rights (Samuels, 2019), and reproductive justice (Ross, 2011).
11
12

13
14 Despite community psychology contributions to social justice work, much research is
15
16 needed to continue to advance social justice. Evans et al. (2017) argued that our efforts are
17
18 usually concentrated on providing assistance, building capacity, and delivering ameliorative
19
20 interventions within marginalized or disenfranchised communities. The authors asserted that
21
22 most community psychology work needs to take a more critical view and stronger stand for
23
24 advancing social justice, for instance, by questioning and achieving the redistribution of
25
26 resources and the equitable participation of citizens in their societies' decision-making processes
27
28 (Evans et al., 2017; Prilleltensky & Nelson, 2002). Psychologists have made contributions to
29
30 denouncing and fostering awareness of the inequalities in society, yet much work is needed to
31
32 ensure that all individuals have access to psychosocial goods (Sanchez Vidal, 2017).
33
34
35
36
37

38 These claims call for redefining the concept of social justice and addressing the failure to
39
40 achieve it considering the current challenges which we are living and society's inability to
41
42 prevent as well as to rectify inequalities and ensure a fair redistribution of natural, technological,
43
44 and social resources (Buser et al., 2020). The movements of today arose among collectives that
45
46 are frustrated by not having access to the conditions that enable them to pursue a dignified life
47
48 (e.g., <http://nopapersnofear.org/>) without coercion (e.g., [https://www.sistersong.net/reproductive-](https://www.sistersong.net/reproductive-justice)
49
50 [justice](https://www.sistersong.net/reproductive-justice)) and needed supports to ensure fair treatment and advance their cause (e.g., #MeToo,
51
52 BlackLivesMatter). These movements also arose because many political leaders have abandoned
53
54 the public good for the purpose of their work. Political leaders—often lost in the tangle of
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 interests unrelated to the well-being of their constituents—are putting at risk the survival of
5
6 human beings and the planet as a whole (<https://ejfoundation.org/>).

7
8
9 Evidence indicates that global inequities (see Crow & Lodha, 2016; Suarez-Balcazar et
10
11 al., 2020) require a conception of social justice that advances in at least four directions: (a)
12
13 recognizing inequalities as a result of the systematic and intersectional violation of human rights
14
15 worldwide, (b) recognizing the global character of the inequities that affect local communities,
16
17 (c) including the proactive role of all stakeholders in pursuing justice, and (d) empowering local
18
19 communities through building global alliances and giving them a voice to advocate for global
20
21 transformative changes.
22
23
24

25
26
27 A social justice framework also calls for embracing a community-based participatory
28
29 research approach (CBPR). A CBPR approach is underscored as a strength-based and
30
31 emancipatory process whereby the research and action components are driven by community
32
33 concerns and carried out by scholars in partnership with the community (Minkler & Wallerstein
34
35 2003). This approach involves promoting critical dialogue directed at increasing participants'
36
37 awareness and understanding of their own capacity to transform their social reality (Freire,
38
39 1970), and developing meaningful participation of communities in the co-creation of knowledge
40
41 (Suarez-Balcazar, 2020). However, just as our vision of social justice needs to be revised, our
42
43 CBPR strategies to promote it also require advancing ways of doing things in collaboration with
44
45 the community. Such ways of doing involve conducting participant-centered research, which
46
47 gives voice to community residents in meaningful ways, promoting the redistribution of
48
49 resources, and facilitating access to power to make decisions about one's life. Working in
50
51 collaboration with community partners to co-create knowledge and address issues that matter to
52
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 them, in their own terms, enables the development and sustainability of partnerships and
5
6 solidarities.
7

8
9 Typically, partnership and coalition building are defined as representing different
10
11 collectives within communities, but are community members really participating in our
12
13 initiatives in meaningful ways? Is the voice of community residents influential in facilitating
14
15 change and promoting procedural and distributive justice? McGarry (2014) have drawn attention
16
17 to the need to distinguish "presence, voice, and influence" in community-based research.
18
19

20
21 Undoubtedly, all interested parties should be present in initiatives to address the inequities they
22
23 experience and be provided with the opportunity to directly influence decisions that affect them
24
25 rather than through representative structures designed by academics, policymakers, or self-
26
27 appointed leaders (Wolff et al., 2016). These structures can reinforce the vulnerable nature of
28
29 racialized minorities and foster paternalistic attitudes in society.
30
31

32
33 The aim of CBPR approaches should be to involve populations that have experienced
34
35 marginalization in meaningful ways in the research process and in ways that they can gain
36
37 procedural and distributive justice. However, this is not a simple task. Often, the groups that
38
39 experience marginalization and social inequalities are farthest removed from occupying
40
41 influential roles in social and political participation and researchers may have hard time
42
43 recruiting them as partners. This is a challenge that requires increasing critical awareness among
44
45 investigators and those in position of power to create spaces to give a voice to the most silent
46
47 communities.
48
49

50
51
52
53 To address this issue, meaningful participation of those most impacted by oppression and
54
55 experiencing injustices is needed. This paper aims to provide some exemplars on how
56
57 partnerships have brought the voices of marginalized populations to make decisions and begin
58
59
60
61
62
63
64
65

1
2
3
4 the process of achieving procedural and or distributive justice. The three cases illustrated in this
5
6 paper attempt to take a more critical view by implementing initiatives focused on influencing
7
8 decisions that impact people’s lives and illustrating participatory approaches to promoting justice
9
10 in three countries—the United States, Spain, and Peru. For each case, we discuss the social and
11
12 community context and factors that lead to inequalities; partnerships and solidarities addressing
13
14 the issue; ways of doing things, strategies and innovations; and challenges and solutions. As a
15
16 result of these three cases, we introduce an integrative social justice framework and close with a
17
18 discussion of the implications for community psychology.

27 **Social and Community Context**

28
29
30
31
32 One of the main challenges people with disabilities experience is unemployment. They
33
34 often face discrimination, prejudice, lack of vocational opportunities to prepare for employment
35
36 and gain skills, and a lack of willingness from potential employers to make needed
37
38 accommodations (see Suarez-Balcazar et al., 2020). According to the U.S. Department of Labor
39
40 (2021), the employment rate of persons with disabilities in 2020 was only 17.9%, down from
41
42 19.3% in 2019, while the rate for persons without disabilities was 61.8%, down from 66.3% in
43
44 the prior year due to the COVID-19 pandemic. These disparities generate profound inequalities
45
46 and directly impact the quality of life of people with disabilities of all ages. We focus this case
47
48 study on the second author’s efforts to promote self-employment among high school students
49
50 with disabilities as an additional career option after graduation.
51
52
53

56 **Transition preparation programs provide opportunities and supports that help youth with**
57
58 **disabilities acquire the competencies and knowledge needed to make a successful transition to**
59
60
61
62
63
64
65

1
2
3
4 adulthood. Unfortunately, these programs are difficult to access for youth of color with
5
6 disabilities (Balcazar et al., 2018). Self-employment and entrepreneurship are rarely included in
7
8 these transition programs, even less often among low-income communities of color.
9

10
11 Unfortunately, positive transition outcomes for youth of color with disabilities who live in
12
13 poverty in urban communities are minimal (Langi et al., 2017). In Chicago, for instance, many
14
15 youths of color with disabilities who complete high school do not have high levels of success in
16
17 enrolling in postsecondary educational settings or securing jobs that pay above minimum wage,
18
19 include benefits like health insurance, or jobs that allow career advancement (Awsumb et al.,
20
21 2020). For these reasons, we are seeking strategies to promote economic justice among this
22
23 population.
24
25
26
27

28 **Building Partnerships and Solidarity**

29
30 **One way of addressing the problem** of low employment participation rates among young
31
32 adults of color with disabilities is to provide opportunities and resources for them to become self-
33
34 employed and to start managing their own businesses at a younger age, before they reach
35
36 adulthood (Kitching, 2014). To address this issue, a participatory research process was
37
38 developed between the research team and multiple local and state partners, including teachers
39
40 from a local charter school for former dropouts, service providers from an agency that offers
41
42 assistance to people with disabilities, and individuals with disabilities who had started their own
43
44 businesses and were receiving supports from a local business incubator. These partners
45
46 participated in ongoing meetings, and in multiple interviews (involving 20 entrepreneurs with
47
48 disabilities, 6 service providers, and 5 school administrators) with the purpose of better
49
50 understanding the supports and barriers to starting and operating a small business through a
51
52 business incubator that was started by a local foundation. Another partner is the Division of
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 Rehabilitation Services (DRS), a federal program that helps individuals with disabilities return to
5
6 work and provides resources to individuals with disabilities interested in starting their own
7
8 businesses. A federal grant sponsored this project, and the main purpose of this phase was to give
9
10 voice to the partners to develop the model that was going to be implemented with high school
11
12 students with disabilities. The university team, recipients of the federal grant, led the effort, yet
13
14 they are not making decisions on whose project gets the resources to start a business. The model
15
16 has been embraced by partners such as several schools in the area that would like to replicate the
17
18 model and DRS, which will enable to sustainability of the solidary to support youth with
19
20 disabilities.

26 **Ways of Doing**

27
28 Based on the information collected through the interviews with entrepreneurs with
29
30 disabilities, the partners finalized the model and the corresponding training curriculum
31
32 addressing the basics of developing a business plan and issues of prejudice and discrimination
33
34 experienced by people with disabilities. Given that entrepreneurship opportunities are not readily
35
36 available to youth, less so to youth with disabilities of color, we used a capacity-building
37
38 framework and a CBPR approach to develop the entrepreneurship model. Although
39
40 entrepreneurship is not an innovative idea, what is innovative here is that the model, developed
41
42 with input from key stakeholders, focused on promoting self-employment among youth of color
43
44 with disabilities and that youth with disabilities have to create their own ideas. Often, these youth
45
46 are used to school and home environments where everything is structured, predetermined, and
47
48 decided by others (parents, teachers, special education personnel), rather than by themselves.
49
50

51
52
53
54
55 These students come from charter schools located in 15 of the poorest neighborhoods in
56
57
58
59
60
61
62
63
64
65

1
2
3
4 Chicago, and approximately 18% of the students receive special education services each year,
5
6 while 13.5% are classified as homeless because they do not have a permanent residence.
7
8

9 The partners' entrepreneurship model enables the youth to come up with their own
10 creative business ideas, develop a support map to identify people who could help or mentor
11 them, develop a business plan, and conduct a business pitch. Students have the opportunity to
12 make their pitch to a panel of judges—which includes small business owners with disabilities
13 from the community. Students whose ideas are selected by the panel are allocated up to 500
14 dollars to purchase supplies or equipment to start their small businesses. In a traditional
15 colonialist power structure, those who hold the resources make the decisions about the
16 distribution of the resources. In this case example, the university team does not make this
17 decision. A panel of judges, which includes entrepreneurs of color with disabilities, make such
18 decision based on the proposal and pitch presented by the youth.
19
20
21
22
23
24
25
26
27
28
29
30
31
32

33 As they develop their own creative ideas, the students receive technical assistance and
34 consultation from the researchers and teachers involved in the project, but they do not make
35 decisions for the students. Some of the business ideas being developed by students included a
36 music production company (DJ) for parties and events; a T-shirt production company with
37 personalized designs, made to order; and a make-up service with natural products. Youth will
38 continue to receive support from the diverse partners (DRS, the researchers, the schools), to
39 implement and sustain their business ideas.
40
41
42
43
44
45
46
47
48
49

50 **Challenges and Solutions**

51
52
53 One of the biggest challenges that we faced at the beginning of the project was unrooting
54 prejudice among people in positions of power who believe that youth of color with disabilities
55 cannot develop their own entrepreneurship ideas. Youth with disabilities are typically operating
56
57
58
59
60
61
62
63
64
65

1
2
3
4 under structured educational systems, in which they have few opportunities to make their own
5
6 choices. Our entrepreneurship model empowered them to explore ideas, develop a business
7
8 proposal, prepare to defend the proposal, and implement their entrepreneurship proposals. The
9
10 team had several discussions with school personnel, service providers, and the youth themselves
11
12 to address these issues. Contrary to the common myth that youth with disabilities cannot be
13
14 entrepreneurs, and consistent with a CBPR approach, we designed a participatory process to
15
16 enable youth of color with disabilities to choose their life project when it comes to starting their
17
18 own business, and explore challenges and solutions to implementing their ideas.
19
20
21
22

23
24 COVID-19 brought in another set of challenges. The pandemic generated inevitable
25
26 challenges to the implementation of the project. There were problems with scheduling the
27
28 trainings, keeping attendance, and accessing computer technology (e.g., some of the students
29
30 were using their phones to attend the trainings, which did not allow them to access some of the
31
32 content). Online education has resulted in poor student engagement with the training modules
33
34 and limited social interactions among students, slowing the learning process. To address some of
35
36 the challenges presented by the pandemic, we are providing more resources than initially
37
38 anticipated, including additional virtual supports, and enhancing dialogue among participants and
39
40 research team members while they develop their business plans.
41
42
43
44

45
46 Another challenge often mentioned by stakeholders is the project sustainability over time.
47
48 Our partnership with DRS has become very valuable for addressing this challenge. DRS is
49
50 interested in the model's success and has opened a training hub to help replicate the program
51
52 with adults with disabilities who can then prepare their business plans to compete for self-
53
54 employment funding, which the agency can provide. In the long-term, DRS could continue to
55
56 support implementing the entrepreneurship model in high schools across the state, including
57
58
59
60
61
62
63
64
65

1
2
3
4 access to the start-up funds as part of their transition preparation program for students with
5
6 disabilities. Bringing in this partner has been critical to increasing awareness among people in
7
8 position of power (DRS personnel) about supporting youth with disabilities to make their own
9
10 decisions and become key players in their entrepreneurship journey, outside of a paternalistic
11
12 approach.
13
14

15
16 Overall, our entrepreneurship model exemplifies how a university-community
17
18 partnership can improve opportunities for youth of color with disabilities to become small
19
20 business owners and address some of the employment challenges they face (Balcazar et al.
21
22 (2014). The training model is being implemented during the 2021-22 academic year in two high
23
24 schools and two organizations, including a larger and wider variety of students with disabilities.
25
26 Following a participatory approach, youth can become agents of change and make their own
27
28 decisions once provided with the opportunities and supports needed to pursue their life projects.
29
30 Although the students have not achieved economic justice yet, they are engaging in the process
31
32 of making decisions and developing their ideas, which may result in addressing economic justice
33
34 in the long run. Our model exemplifies practical ways in which community psychologists can
35
36 collaborate with multiple stakeholders to promote small-scale systemic change to pursue
37
38 economic justice. Entrepreneurship can be a viable career option for many people with
39
40 disabilities and is being promoted as an effective employment strategy for adults with disabilities
41
42 from diverse ethnic and racial backgrounds. In this case, CBPR approaches are being utilized to
43
44 build the youth's capacity to create a business plan, youth are provided with resources and
45
46 opportunities, opportunities to make decisions, and the right to be who they want to be.
47
48
49
50

52

53 **Second Case Study: Promoting Reproductive Justice Among Roma Women in Spain**

54 **Social and Community Context**

55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 The reproductive rights of Roma women and girls (RWG) living in at-risk contexts are in
5 jeopardy as the pandemic leaves its imprints on the most marginalized communities. The Roma
6
7 (also known as Gypsies) are Europe’s largest ethnic group that often experience discrimination,
8
9 negative stereotypes, and are likely to live in poor living conditions (Crowley et al., 2013).

10
11 During the COVID-19 lockdown, RWG were under strain to perform roles in their households
12
13 and the community—including childcare, elderly care, care for husbands or fathers, soliciting
14
15 support from social services, and daily chores—as families had to find ways to survive without
16
17 external support. Roma families traditionally live close to their extended relatives, and girls are
18
19 expected to play multiple roles as caregivers, including motherhood and marriage, at a very
20
21 young age, in some cases as young as 13 or 14 (United Nations Fund for Population Activities,
22
23 2018). When the pandemic hit and schools across the world moved to online education, the
24
25 ability to participate in online schooling depended on students having the space, time, access to
26
27 computers and Wi-Fi, and the support from families. However, Roma girls living in at-risk
28
29 environments have limited access to computers or reliable Wi-Fi, live in overcrowded housing,
30
31 are tasked with household responsibilities, and their families often face financial crisis
32
33 (Korunovska & Jovanovic, 2020). Prior to the pandemic, many Roma communities in Spain
34
35 engaged in informal work (e.g., as street vendors or housekeepers), and the COVID-19 pandemic
36
37 disrupted their only sources of income. In addition, due to the informal status of their work and
38
39 discrimination towards them, many Roma families were excluded from receiving government-
40
41 sponsored unemployment support. The marginalized contexts of Roma families forced them to
42
43 live in fear of the worsening economic conditions and not necessarily fear of the spread of the
44
45 COVID-19 virus.

46 47 48 49 50 51 52 53 54 55 56 57 58 **Building Partnerships and Solidarity for Community-Based Advocacy** 59 60 61 62 63 64 65

1
2
3
4 The aim of this case study is to illustrate a collaboration between researchers from the
5
6 Center for Community Action and Research at the University of Seville (CESPYD) and RWG
7
8 from two neighborhoods in Seville, Spain designed to ensure that local officials heard the voices
9
10 of RWG in the distribution of resources to ameliorate the economic impact of COVID-19 (see
11
12 Garcia-Ramirez et al., 2020). The RWG involved were all mothers from the most marginalized
13
14 areas of their respective neighborhoods.
15
16
17

18
19 Community-driven advocacy can ensure that RWG transform their experiences of
20
21 oppression into political acts (Lindberg et al., 2020). Through a community-driven advocacy
22
23 approach, RWG have created a space to identify the issues of power that are at play in
24
25 maintaining unjust conditions and gain the capacity to demand change. This approach has
26
27 allowed RWG to assume new roles that are not exclusive to being a mother, wife, or daughter.
28
29 From this approach, the fostering of the university-community solidarity provided a space that
30
31 fostered RWG's capacity to voice the issues that mattered to them and connected them to key
32
33 stakeholders and city officials that could provide access to resources needed to meet their needs.
34
35 The solidarity is likely to sustain over several years, given their desire to continue working
36
37 together.
38
39
40
41

42 43 **Ways of Doing During the COVID-19 Pandemic**

44
45 Since the start of the COVID-19 pandemic, RWG and researchers (henceforth, the
46
47 partners) have adapted a three-phase advocacy strategy proposed by Miranda et al. (2020). This
48
49 strategy includes: (a) building critical knowledge at the local level, (b) building alliances and
50
51 resources to develop the capacity to advocate, and (c) implementing coordinated multi-level
52
53 advocacy efforts.
54
55
56

57 58 ***Building Critical Knowledge***

59
60
61
62
63
64
65

1
2
3
4 To identify what RWG were going through during the pandemic and how to support
5
6 them, the partners and RWG decided to collect information from other Roma women regarding
7
8 the impact of COVID-19 on their lives. The partners created questions of interest for an open-
9
10 ended interview with Roma women from their communities. Via snowball and word-of-mouth
11
12 recruitment, a total of 22 Roma women were interviewed using WhatsApp audio messages. At
13
14 the time, WhatsApp was the best way to communicate with the RWG via prepaid SIM cards. The
15
16 22 interviewees were members of the RWG's immediate and extended families, as well as close
17
18 friends. The partners received and transcribed the recorded messages. They also developed a
19
20 thematic analysis that was then triangulated during Zoom calls with the RWG (Lawson, 2015).
21
22 This member checking technique has been reported as a strategy for enhancing the rigor of
23
24 qualitative data accuracy (Tracy, 2010). During the Zoom calls, the partners reflected on the
25
26 patterns found in the narratives. Overarching themes included lack of essential resources to take
27
28 measures for COVID-19 safety (e.g., lack of money to purchase masks, lack of running water to
29
30 wash hands), digital gaps that affected schooling for children, anti-gypsyism in the social media
31
32 and the news, and exclusion from COVID-19 economic support measures from the government.
33
34 These themes built on critical knowledge that legitimized RWG's experiences and their desire to
35
36 challenge the dominant narratives and define by themselves the impact COVID-19 was having
37
38 on their lives. Given the lack, and for some women, limited access to the internet and Wi FI, the
39
40 university partners facilitated access, and enhanced the capacity of RWG to navigate the internet
41
42 to allow RWG to participate fully. From a CBPR approach, RWG collaborated on data
43
44 collection, data analysis, and were fully engaged in advocacy efforts described below.
45

55 ***Building Solidarities and Resources to Develop Capacity to Advocate***
56
57
58
59
60
61
62
63
64
65

1
2
3
4 During the pandemic, a lack of financial resources to continue the collaboration between
5
6 the university and Roma women forced the team to mobilize and raise funds to build solidarity
7
8 beyond their neighborhoods. We raised funds on the GoFundMe website to provide economic
9
10 support for the RWG's access to reliable Wi-Fi and optimize online platforms for community
11
12 organizing efforts. For example, we used the Change website, an online petition platform utilized
13
14 to share messages and gain worldwide support for various causes. Our RWG partners found
15
16 themselves in a role they had not played before—fundraising and writing petitions. Through
17
18 Change we wrote a petition that urged the city council to schedule a meeting with the partners to
19
20 advocate for the partnership's funding and to monitor how the city council planned to involve
21
22 RWG in the post-pandemic reconstruction plans. With over 1,200 signatures, the petition gained
23
24 local and international support. This support led to contact with an influential Roma community
25
26 organizer who connected RWG to other important decision-makers. For example, RWG
27
28 networked with city council representatives as well as national and local organizations.
29
30
31
32
33
34

35
36 The team realized that the online environment was difficult to navigate for a few reasons,
37
38 including lack of familiarity, limited access, and lack of a clear group identity. The group
39
40 decided to continue the fundraising efforts to gain start-up funding for formalizing the RWG's
41
42 own grassroots organization. The organizational naming process was a significant turning point,
43
44 as the RWG came to a consensus on how they wanted to be represented and what image they
45
46 wanted to project. The RWG decided their name would be YILÓ (meaning *heart* in the Romani
47
48 language), with the tagline “women, mothers, daughters, neighbors that give voice to their
49
50 neighborhoods.” The naming process created a sense of solidarity and accomplishment among
51
52 the RWG. YILÓ would provide a space for the RWG to advocate for their communities with the
53
54 voluntary technical support of CESPYD researchers. YILÓ ensured that the RWG had a
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 supportive network as well as reciprocity and recognition between each other and their
5
6 communities. Through this process, RWG engaged, with the support of the university partners
7
8 and local organizations, in roles that they had never assumed before and sought new identities
9
10 outside of their traditional role of mothers and caregivers.
11
12

13 *Implementing Coordinated Multi-Level Advocacy Efforts*

14
15
16 The RWG developed a statement that highlighted their local knowledge about the impact
17
18 COVID-19 was having on their community and disseminated it in diverse media with the support
19
20 of the partners. This statement resulted in articles across nine different newspapers, a television,
21
22 and a radio program. The statement was then disseminated across local grassroots networks and
23
24 the broader university community. Shortly after, the city mayor requested a meeting with YILÓ.
25
26 The city council promised to support RWG in these neighborhoods. A few months later, and
27
28 with the support of a city council representative, YILÓ attended a citizen plenary session in
29
30 November 2020 in which they called for a real political and economic commitment to their
31
32 communities and urged that RWG be included in city council upcoming city-wide plans, which
33
34 included COVID-19 economic stimulus packages. YILÓ networked and connected with other
35
36 women-led groups, social movements, and other national Roma organizational networks. The
37
38 university partners supported transferring knowledge from local RWG to European-level
39
40 platforms—for example, at the launch of the European Public Health Alliance’s Roma Health
41
42 Network. Coordinated multi-level advocacy efforts ensured that solutions to the issues faced by
43
44 the Roma people touched upon different systemic issues regarding RWG’s participation.
45
46
47
48
49
50
51

52
53 The new ways of doing described here strengthened the solidarity between the
54
55 researchers, the RWG, and the Roma organizations. Building the capacity of RWG to advocate
56
57 for resources and involving RWG in the co-creation of new knowledge strengthened the
58
59
60
61
62
63
64
65

1
2
3
4 solidarity between partners who have been working together for some time. The partners have
5
6 sought funding from the European Union to continue the partnership and solidarities.
7

8 9 **Challenges and Solutions**

10
11 The partners identified actors at different levels that were responding to the immediate
12 needs of the RWG. However, uncoordinated actions and fragmented resources inadvertently
13 silenced several of the RWG. After weeks of receiving no help from the local Office of Social
14 Services, YILÓ advocated for another meeting with the city council. Following this meeting, the
15 city council quickly responded by individually calling each of the RWG and providing their
16 families with the support they needed, such as food stamps and economic support. It is possible
17 to assume that the City Council responded in such a way to silence members, instead of investing
18 resources in the whole community. However, this prompted Roma NGOs to take on the role of
19 humanitarian aid, providing essential supplies to the broader Roma community. In this case,
20 coordinated action ensured that opportunities and leadership roles were shared, resources were
21 not duplicated, and a sense of solidarity was generated across individuals.
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38 The university partners were in a position of power compared to RWG during the
39 lockdown period. In a situation that stripped RWG communities of resources and influence, the
40 partners played an important role in disrupting some power dynamics. The robust and genuine
41 commitment the partners had towards the group of RWG and vice versa deepened the
42 relationship and sense of responsibility to take action together. Working towards a common goal
43 gave a new meaning to RWG home space, since their home was now a place to advocate for
44 their communities. This was true for the partners as well. As a result of paying close attention to
45 the group dynamics, as well as following a CBPR approach, the partners became more mindful
46 of balancing the power dynamics (see Vaughn et al., 2018). A CBPR approach to research calls
47
48
49
50
51
52
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 for researchers to attend to power dynamics and balance power by building capacity, distributing
5 resources, and encouraging the community to make decisions (Wallerstein et al., 2019). The
6
7
8
9 RWG felt seen and heard during a time when negative images of them were being projected and
10
11
12 in times when their voices did not count. Despite the limited gains made during this
13
14 collaboration, RWG’s struggle for justice continues, and the university team has been able to
15
16 obtain funding from the European Union to continue their partnership to promote justice for
17
18
19 RWG, which in this case has concentrated in enabling RWG to see themselves in roles other than
20
21 mothers and caregivers. The experiences of RWG in Spain were linked to the realities of other
22
23
24 RWG in Bulgaria and Romania. Sharing experiences contributes to building a cohesive “big-
25
26 picture” narrative and gain power in numbers to challenge discriminatory structures.
27

28
29 **Guided by a reproductive justice framework, RWG were supported to assume other roles**
30
31 **atypically to those assigned to them by society, and were effective in engaging in advocacy and**
32
33 **political roles. The reproductive justice framework supports the recognition of RWG as political**
34
35 **actors who have the capacities to advocate for their rights and pursue goals vital to them. The**
36
37 **process of recognition towards RWG from researchers, organizations, and policymakers gives**
38
39 **power to challenge dominant structures. The CBPR strategies utilized here that facilitated justice**
40
41 **and have helped sustain the solidarity between partners, included co-creating new knowledge**
42
43 **with the RWG based on their experiences; empowering RWG to define themselves, and giving**
44
45 **their voice to define their roles and partnership agenda; building their capacity for advocacy; and**
46
47 **RWG meaningful engagement in research.**

52 53 **Third Case Study: Social Justice and Migratory Processes Among Indigenous**

54 55 **Women in Post-Internal Armed Conflict in Peru**

56 57 **Social and Political Context** 58 59 60 61 62 63 64 65

1
2
3
4 A few decades ago, Peru went through an “internal armed conflict” of tremendous
5
6 relevance and psychosocial impact, which played out in a society with a long-standing history of
7
8 violence and exclusion. In 2003, the Truth and Reconciliation Commission (TRC) presented its
9
10 final report, which aimed to identify the causes and consequences of the armed conflict that took
11
12 place between 1980 and 2000. This report revealed the extent of the human rights violations by
13
14 internal terrorist groups (mainly the Communist Party of Peru-Shining Path, PCP-SL) and the
15
16 Peruvian army. This violent era resulted in 69,000 people dead or missing, thousands of
17
18 communities negatively affected, and more than half a million internally displaced people (Truth
19
20 and Reconciliation Commission, 2003). Data and testimonies showed a differentiated impact of
21
22 violence based on economic, ethnic, and gender inequalities (see Reynaga-Abiko, 2008). Thus,
23
24 the report noted that the primary victims lived in Peru’s most economically and geographically
25
26 excluded and poorest regions. In addition, violence changed the dynamics of gender relations in
27
28 many communities (Reynaga-Abiko, 2008).
29
30
31
32
33
34

35
36 Prior to the internal armed conflict, women played a position of subordination as mothers
37
38 and caregivers with little to no power to make decisions. This was the product of multiple
39
40 systems of oppression. During this internal armed conflict, however, women took on new roles
41
42 and took care of their families and their communities while facing forced displacement (Rivera-
43
44 Holguín & Velázquez, 2020).
45
46
47

48 **Building Partnerships and Solidarity**

49

50
51 This case study illustrates a collaborative partnership between the community of
52
53 Sacsamarca, located in the province of Huanca Sancos in the southern region of the state of
54
55 Ayacucho, and the Academic Department of Social Responsibility of the Pontificia Catholic
56
57 University of Peru (PUCP, [represented by the fourth author of this paper]). The community
58
59
60
61
62
63
64
65

1
2
3
4 population is 1,204 inhabitants (INEI, 2018), and almost the entire population is bilingual, with
5
6 Quechua being their first language followed by Spanish. Access to essential services is still
7
8 precarious; few households have water, electricity, or sewage services, and basic needs are not
9
10 met. This is a community affected by the internal armed conflict and identified in the final report
11
12 of the TRC as one of the first to confront the abuses committed by the PCP-SL (TRC, 2003).
13
14 Due to the armed conflict, the population of Sacsamarca has decreased by 25% in the last thirty
15
16 years, with mainly older adults remaining (Eskenazi et al., 2015).
17
18
19
20

21 The partnership started from a request for support from the community to help elevate the
22
23 voices of indigenous women's migration processes in the Sacsamarca community. Based on a
24
25 collaborative agreement between the community and the university, the following working areas
26
27 were established: (a) community strengthening, (b) cultural identity, (c) management of the
28
29 environment, and (d) political incidences (DARS 2019). Various projects and initiatives have
30
31 been developed to address these working areas. Under community strengthening and cultural
32
33 identity, it was observed that many women who migrated out of the community returned to
34
35 Sacsamarca, unlike the more common one-way migration process that took place in other regions
36
37 of the country.
38
39
40
41
42

43 Following the principles of decolonial feminist community psychology approach
44
45 (Boonzaeir & van Niekerk, 2019; Ciofalo, 2019), and CBPR (Minkler & Wallerstein, 2003), the
46
47 researchers approached the community to get to know the women in their context and created a
48
49 safe space to hear the women's voices that may have been silenced by the multiple systems of
50
51 oppression they had experienced—violence, displacement, and marginalization. The safe space
52
53 created opportunities for dialogue and mutual learning once trust was established. The team
54
55 worked with six adult women, between 30 and 60 years old, who resided in Sacsamarca and had
56
57
58
59
60
61
62
63
64
65

1
2
3
4 at one point migrated out of the community and returned. The researchers identified these
5
6 women through one-on-one contacts with the community, and the women agreed to collaborate.
7
8

9 **Ways of Doing and Being**

10
11 To listen to the women and find out what matters to them (see conversations that matter,
12
13 Suarez-Balcazar, 2020), the team engaged in conversations with the women to identify their
14
15 migration processes using life stories and field ethnography methodologies (see Flick, 2014).
16
17

18
19 Life stories is a technique based on social interaction between two people, in which a discourse
20
21 is built in a joint dialogical reflection (Flick, 2014). This technique is based on the biographical
22
23 method, allowing a condensing of the participant's historical and social structure and personal
24
25 history. The technique enabled the team to connect individual experiences with the
26
27 characteristics of historical and social processes (Arfuch, 2013). Additionally, the team took part
28
29 in and recorded different community events, especially those in which women participated. What
30
31 follows is a synthesis of the information gathered about how the voices of the indigenous women
32
33 came alive.
34
35
36

37
38 One of the specific requests from the community's women to the partnership was to
39
40 publish their stories and experiences during the armed conflict. This desire came from not feeling
41
42 recognized within the official memory. Instead, the men who sought recognition for their stories
43
44 were published, while the women's stories were not. Thus, the university partners gave voice to
45
46 the women of the community. After years of conflict, justice for displaced community members
47
48 means that the women stories become part of the official memory within the community. This
49
50 collaboration with the university researchers is still ongoing, and the first outcome will be that
51
52 these experiences and stories are published and officially delivered in a communal assembly.
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 For the women, this was a form of symbolic reparation, something to pass on to future
5
6 generations, and a way to preserve their stories and voices.
7

8
9 The CBPR approach created conditions between the community psychology researchers
10
11 and the participating indigenous women, whereby the power dynamics and limitations of the
12
13 women to assume more active roles in the research process were limited due to literacy and
14
15 reduced capacity. It was difficult to break from the tendency of the researchers to make all
16
17 decisions—breaking the colonial and paternalistic approach to allow the indigenous women to
18
19 decide for themselves. Listening to their stories and determination to have their stories heard and
20
21 known to others at the local and national level helped the researchers, who continuously adopted
22
23 a humble and participatory approach, to leave their colonial ways of doing behind. Through
24
25 storytelling and listening, being in the role of learners, the university partners were able to
26
27 change the power dynamics allowing indigenous women to take the lead and teach their stories
28
29 to others. Respecting the women’s space and history to preserve their stories and given them
30
31 voice and agency has helped sustained the partnership and solidify the relationship between
32
33 researchers and community members.
34
35
36
37
38
39

40 *Andean Migration: The Internal Armed Conflict as a Turning Point*

41
42
43 The migration of the women from Sacsamarca has been caused by poverty and violence.
44
45 The women search for better opportunities for a fairer and more dignified life. Due to centralism,
46
47 Lima and other main Peruvian cities concentrate education and health services. In most cases,
48
49 early indigenous women who migrated took jobs as domestic workers, wage workers in farming,
50
51 or traders, often under unsafe working conditions. In addition to ethnic and gender
52
53 stigmatization, market neoliberalism increases the job precariousness of these migrant women.
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 One crucial factor, generally overlooked by past research, is the peasant network (“*red de*
5
6 *paisanaje*” in Spanish), understood as a family and communal support network present in the
7
8 city to which rural migrants move. Based on the information collected, we learned that the
9
10 peasant network performs different functions such as providing housing, offering financial and
11
12 social support, maintaining cultural practices, and generating commercial and development
13
14 routes. In the case of women, these functions have re-created a sense of community and the
15
16 notion of territory, as well as allowed the emergence of localized identities, supported by kinship
17
18 and community relations, based on artistic and cultural traditions. These functions are linked to
19
20 the sense of belonging among community members, which is supported by the place of
21
22 migration and is part of the adaptation processes of the migrants (Sonn, 2002).
23
24
25
26
27

28
29 The internal armed conflict was a breaking point in the history of the Sacsamarca
30
31 community. The impact was evident not only at the economic, political, and social levels but also
32
33 in the migration processes that had been taking place. Violence and terror led to forced
34
35 displacement (Venturoli, 2009), and arrival and relocation processes became more costly for
36
37 migrants—mainly for the women (Ramirez, 2018). According to the participants’ accounts, they
38
39 experienced the loss of their homes, family members, and security, and lived under a constant
40
41 threat to their lives from the violence. The displacement was final in many cases, but there was a
42
43 return to the community in others. This return was possible because, as reported by one
44
45 participant, “Sacsamarca is a community that allows one to return.” Although women responded
46
47 to the violence by migrating to other places, their aim was to return to their community. Sert
48
49 (2010) points out that many displaced people do not return to their origins. However, in Peru,
50
51 evidence indicates that more than 50% of displaced people returned to their places of origin after
52
53
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 the armed conflict ceased (Ramirez, 2018). These women are part of that percentage that
5
6 returned after the threat to their lives ended.
7
8

9 Based on conversations with the women, we identified two factors that allowed migrants
10 to return, setting up migration processes back and forth among the participants: Sacsamarca is a
11 *courageous* and *sheltering* community. On the one hand, we found a heroic discourse, based on
12
13
14
15
16 being one of the first communities to confront the PCP-SL in Ayacucho, which produces pride
17
18 and fosters the participants' sense of belonging (Noa, 2018). On the other hand, the community
19
20 offers warmth and security. Another element contributing to the women's return was their
21
22
23
24
25
26

These migration processes are characterized by being diverse and dynamic -- *round trip*. In other words, in some cases, the possibility of new migration processes remains open. In contrast to other communities that have experienced displacement, many of Sacsamarca's indigenous women wanted to return to their homes and land.

Challenges and Solutions

Women in Peru impacted by the armed conflict have experienced so much violence that they are often protective of their own space, experiences, and communities. The partnership included teachers at a private university in the capital, Lima, which has its own power connotation. Displaced communities often perceive Lima as a capital that has turned its back on the needs and realities facing indigenous communities in the Andean regions. Therefore, the university partners applied the principles of CBPR to develop trust, volunteer in the community, and respect the community through a constant and stable interaction over time (Minkler & Wallerstein, 2003; Sonn, 2002). A relationship based on trust allowed the women to identify the

1
2
3
4 partnership's goals and expectations, enabling the six women who partnered with the university
5
6 researchers to define their level of participation and roles, and to use their voice and stories as a
7
8 source of liberation. It is essential to recognize internal tensions such as the emotional trauma
9
10 these women had experienced and their mistrust of institutions of power. The university partners
11
12 took the necessary time to develop trust and provide the women with a safe space to share their
13
14 stories. Listening to the heartbreaking stories of the women, full of losses and abuse, was
15
16 emotionally hard for the researchers. Therefore, it became necessary to engage constantly in
17
18 self-reflection and open dialogue. In such circumstances, peer debriefing and constant
19
20 deconstruction are highly recommended to move from individual Western psychology to Latin
21
22 American community psychology.
23
24
25
26
27

28
29 In conclusion, by returning to the community, women had the opportunity to develop
30
31 agency, tell their stories, and assume their roles within the community. The CBPR strategies and
32
33 social justice themes emerging from this case, which in turn have sustained the partnership,
34
35 include the need to raise the voice of oppressed community members, respecting oppressed
36
37 individuals' space and history, promoting agency and decision making, access to opportunities to
38
39 tell their stories, and gathering community narratives based on their life experiences. Like the
40
41 other two cases, community participants are playing a critical role in shaping the research
42
43 project, which has facilitated the fostering of strong solidarities between the women from the
44
45 community and the researchers.

47
48
49

50 Discussion

51
52
53 The three international cases depicted here speak to ways of doing and being within
54
55 community-based participatory approaches to promoting economic justice, reproductive justice,
56
57 and justice for displaced women, giving a voice to oppressed communities. The first case,
58
59
60
61
62
63
64
65

1
2
3
4 highlights the complexity of factors interacting in a critical context and the importance of a
5
6 multidimensional intervention. The authors and their partners developed ways of doing by
7
8
9 creating an entrepreneurship model directed at improving the economic condition young of color
10
11 with disabilities in the long run. Access to resources and opportunities for employment are vital
12
13 to promoting distributive justice and are also aligned with community psychology efforts to
14
15 promote systemic change. Youth of color with disabilities are provided with an opportunity to
16
17 identify and create their life project and pursue their goals.
18
19

20
21 The second case study exemplifies a participatory approach to community psychology in
22
23 action, which created the circumstances for effective advocacy. In this case, Roma women and
24
25 girls participating in this project used their social network to gain information and collect data
26
27 about the community's needs and resources during the COVID-19 pandemic. Their involvement
28
29 in data collection and discussions within the community brought about social actions with the
30
31 local power structures such as the local city council, enabling social change.
32
33

34
35 In the third case life storytelling became a powerful method to raise the voices of
36
37 indigenous women. Storytelling was a powerful tool to rethink stories of oppression, giving
38
39 evidence of the multiple effects of war, poverty, and racial and gender issues. The case of
40
41 Peruvian women displaced from their community presents a decolonial feminist approach that
42
43 emphasizes our responsibility as scholars and practitioners to create an interactive and safe space
44
45 to give voice to those experiencing oppression. Moreover, this storytelling case emphasizes the
46
47 importance of creating trust between researchers and an oppressed community, to raise their
48
49 voices and have their place in history recognized (Arcidiacono, 2017; Arcidiacono et al., 2021;
50
51 Di Napoli et al., 2019). This is a unique example of the principles and methodological research
52
53 strategies developed by decolonial feminist community psychology. In all, building trust is an
54
55
56
57
58
59
60
61
62
63
64
65

1
2
3
4 essential process, as illustrated in the three cases, and not just a social value; it is the basic
5
6 principle of all social interventions. In all three cases, the social justice-focused, CBPR approach
7
8 enabled the researchers to develop and foster partnerships and solidarities grounded in trust,
9
10 meaningful engagement in research, and respecting the voices and agency of participants (see
11
12 Minkler & Wallerstein, 2003; Sonn, 2016; Suarez-Balcazar, 2020; Vaughn, et al., 2018; Wolff,
13
14 et al., 2016).

15
16
17
18
19 Figure 1 illustrates a synthesis model that captures the multilayered complexities of social
20
21 justice that incorporates the main themes identified in the three cases. The model includes the
22
23 context of the racialized experiences of oppression illustrated in the three international cases
24
25 such as lack of opportunities for youth of color with disabilities, RWG marginalization in times
26
27 of COVID-19, and violence against displaced indigenous women in Peru. This is followed by
28
29 the community-based participatory initiatives and strategies utilized here such as involving
30
31 stakeholders in the co-creation of knowledge based on the experience of marginalized
32
33 communities; providing access to resources and opportunities; empowering communities to
34
35 define themselves; giving voice and agency to define roles and agenda; building individual
36
37 capacity; gathering community narratives based on their life experiences; and meaningful
38
39 engagement in research. This process resulted in specific outcomes illustrated in figure 1. The
40
41 framework in Figure 1 captures the interconnectedness of the themes emerging in the case
42
43 studies and the ongoing dynamic and interactive nature of the complexity of social justice.
44
45
46
47
48
49

50
51 These three cases open a debate concerning the values, the training, and the competencies
52
53 of community researchers engaged in CBPR to promote social justice. We recognize that
54
55 creating trust among the community participants and the institutional academic researchers is a
56
57 significant dimension. It is a competence that requires active listening, developing meaningful
58
59
60
61
62
63
64
65

1
2
3
4 and mutually beneficial relationships, time investment, shared participatory leadership, and
5
6 awareness of the power dynamics in the particular context. Developing trust is not implicit
7
8 knowledge, and often, communities are subject to mistrusting relationships with universities and
9
10 others in a position of power (Minkler & Wallerstein, 2008). Advancing social justice through
11
12 community research and practice needs to focus on inviting the community to be involved in
13
14 research in meaningful ways and becoming co-creators of knowledge with the researchers (see

Sonn, 2016; Suarez-Balcazar, 2020).

Acting on power imbalances, giving voice to people, supporting oppressed communities, and advocating for social change are critical aims of CBPR in the pursue of social justice (see Minkler & Wallerstein, 2008). However, there is a need to move away from mainstream psychology to one that enables questioning issues of power and focuses on epistemology ethics that resist historical neoliberalism (Keast, 2020).

The lessons learned from these case studies highlight the following key points to consider in future research. First, the importance of the intersectionality of social action to understand complex social and community contexts that lead to oppression and marginalization. Second, CBPR is the appropriate approach to community research designed to promote justice and elevate the voices of those affected by oppression. Third, building trust is the social glue that enables the process of connecting with the community. This process takes time, and often, volunteering is an effective way to build such trust. Finally, promoting justice requires a reflective approach that emphasizes ongoing dialogue, deconstruction of a colonial approach, and a feminist ideology. As articulated by Sonn (2016), “decolonizing methodologies and the liberation paradigm privileges and seeks to elevate the experiences and knowledges of those who have been marginalized and oppressed” (p. 312).

1
2
3
4 This article depicts three experiences of communities in different countries facing
5
6 oppression, inequality, and marginalization seeking social justice. We aimed to encourage
7
8 reflection on effective ways of giving voice to community members about ways to address their
9
10 needs. Future community research and action should document the long-term sustainability of
11
12 these efforts.

Figure 1. Contexts of racialized oppressions and social justice outcomes

Racialized Experiences of Oppressions

Lack of Opportunities for Youth of Color with Disabilities in the US

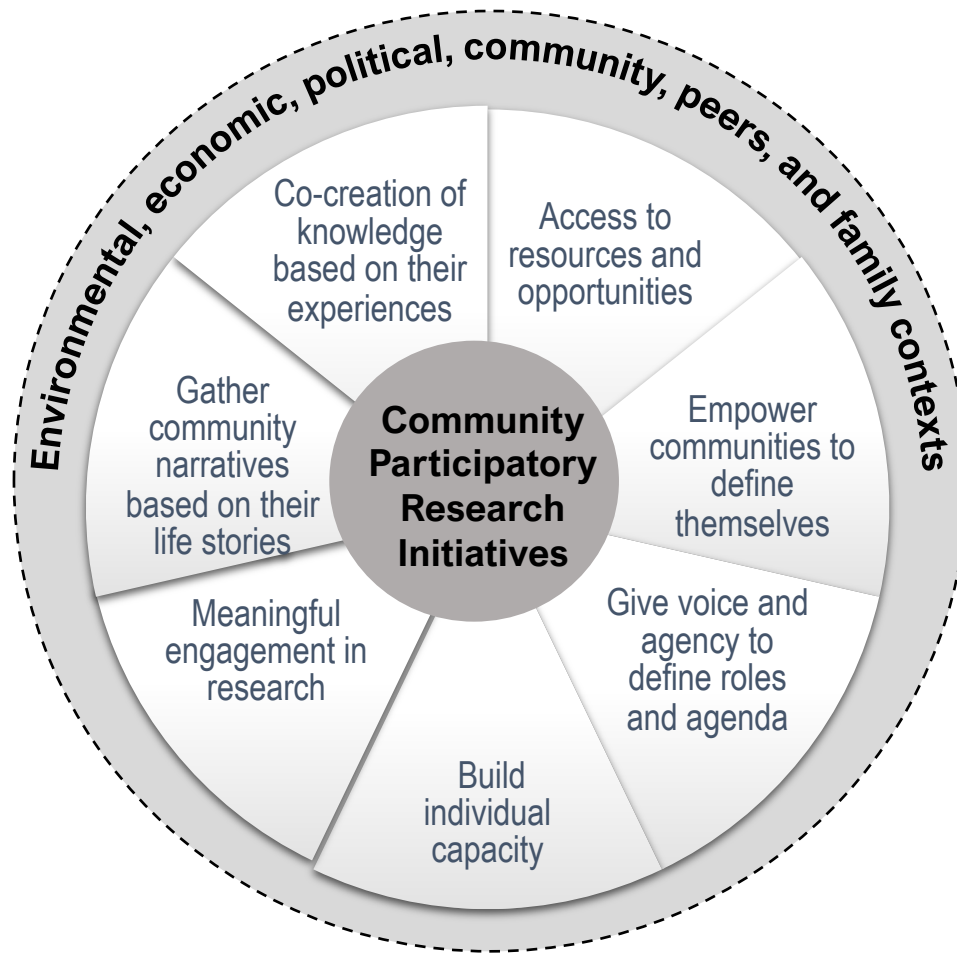

- High incidence of unemployment
- Lack of opportunities to decide
- Lack of resources to implement their plans

Roma Women and Girls' Marginalization in COVID-times in Spain

- Overcrowded substandard households
- Limited roles assigned by society (mother, wife)
- Lack of voice to advocate

Violence against Displaced Andean Women in Peru

- Persecution and violation of their rights
- Forced displacement and resettlement
- Voices are not recognized

Social Justice Outcomes

Economic Justice through entrepreneurship

- Self-Employment
- Capacity building

Reproductive Justice through advocacy

- Critical vision of their everyday experiences.
- Recognition as community references.
- Accountability gendered human rights

Resettlement Justice through citizenship

- Political influence in their new communities
- Proud of their cultural identity
- Implication in restoring justice in their homelands
